Welcome
An introduction from our President

“It’s my great pleasure to introduce you to our pioneering 2D X-ray units. Our comprehensive range of digital units meets all your daily imaging needs – working perfectly with our highly advanced Planmeca Romexis® software for the most detailed extraoral and intraoral examinations possible.

I’m extremely proud of our product innovations, and for over 40 years we’ve worked closely with dental professionals to set new standards in our field. What makes us a bit different is that all core product development and manufacturing takes place in Finland – ensuring exceptional quality and unmatched attention to detail at every stage of the process.

And we also have a dedicated team of R&D professionals behind the scenes, developing breakthrough innovations that make a real difference. Our robotic SCARA technology, for example, offers flexible, precise and complex movements needed for extraoral maxillofacial imaging. Our Planmeca ProMax® 2D X-ray units are all 3D-ready, which means you can easily upgrade at a later point. Therefore I’m thrilled to invite you to discover our world of 2D imaging.”

Heikki Kyöstilä
President and founder
Planmeca Group
Industry-leading 2D X-ray units

Introducing our world-class range of 2D X-ray units – offering the most advanced and versatile devices and software to meet all your 2D extraoral and intraoral imaging needs.
Planmeca extraoral units offer two alternative solutions to maxillofacial imaging. Planmeca ProMax® – the complete imaging centre – sets a new benchmark in panoramic and cephalometric imaging. Planmeca ProOne® is designed with simplicity in mind. It is a compact and easy-to-use panoramic X-ray unit that’s both cost-effective and flexible.
Planmeca ProMax® 2D

*Planmeca ProMax® is a complete maxillofacial imaging system. The design and operation principles are based on the latest scientific research, technological innovations and the most demanding needs of modern-day radiology.*

**Key features:**

**Advanced technology**
- **Autofocus** positions the focal layer automatically for perfect panoramic images
- **Dynamic Exposure Control (DEC)** measures the patient’s radiation transparency and automatically adjusts exposure values
- **Patented SCARA (Selectively Compliant Articulated Robot Arm) technology** guarantees an anatomically accurate imaging geometry for clear, error-free images
- Easy upgrades – add cephalostat or 3D imaging capability at any time

**Effortless use**
- Full-view patient positioning with triple-laser patient positioning lights
- Side entry for comfortable access
- Easy-to-use graphical interface
- **ProTouch™ Desktop** for remote control panel operation on the imaging workstation
- Versatile **Planmeca Romexis® 2D imaging software**
- TWAIN support and full DICOM compliance

*Available in Planmeca ProMax 2D S3*
Imagine if your X-ray unit could recognise your patient’s anatomy

The unique Autofocus feature automatically positions the focal layer using a low-dose scout image of the patient’s central incisors. It uses landmarks in the patient’s anatomy to calculate placement, enabling practically error-free patient positioning and dramatically reducing the need for retakes. The result is a perfect panoramic image.

Positioning errors are now a thing of the past – with SCARA technology you can take an ultra-low-dose scout image of your patient’s central incisors for a fast diagnostic panoramic image every time.
Effortless and comfortable

Our industry-leading Planmeca ProMax® unit is known across the world for incredible ease of use and exceptional patient comfort. A relaxed patient means a smooth imaging workflow and the best possible image quality.

Open patient positioning
- Position patients effortlessly thanks to open-face architecture
- Correct patient positioning either with Autofocus or manually
- Make fine adjustments using positioning lasers and joystick
- Work with an unrestricted view of your patient
- Avoid claustrophobic feelings in patients
- Accommodate wheelchairs easily with side-entry access

User-friendly control panel
- Clear and straightforward graphical user interface guides you smoothly through your work
- Pre-programmed sites and exposure values for different image types and targets save you time and allow you to focus on your patients
- The control panel can also be operated remotely from the imaging workstation

Laser-assisted patient alignment
- A triple laser beam system accurately indicates the correct anatomical alignment points for patient positioning
- The midsagittal plane positioning beam indicates the correct sideways alignment
- The Frankfort horizontal plane positioning beam shows the correct forward tilt of your patient’s head
- The focal layer positioning beam indicates the focal layer position and ensures images are sharp and clear
- Fine adjustments can be made using the joystick

Improved image quality with Dynamic Exposure Control (DEC)
The unique digital Dynamic Exposure Control (DEC) automatically adjusts the exposure values for each individual patient based on their anatomic structure and bone density. DEC improves the quality of both panoramic and cephalometric imaging with more consistent brightness and contrast.

Adjustable focal layer
Developed based on scientific research, the imaging geometry matches the shape of the focal layer with the patient’s anatomy, resulting in clear panoramic radiographs. Simply select the shape of the focal layer on the graphical user interface, according to the size and shape of the patient’s jaw.
Planmeca ProMax® features highly advanced and exclusive robotic SCARA (Selectively Compliant Articulated Robot Arm) technology – providing flexible, precise and complex movements required for rotational maxillofacial imaging.

**Unlimited movement range**
Our revolutionary SCARA technology combines an electro-mechanical construction with real-time computation of dynamic rotation patterns. This enables optimised radiography for each individual patient, meeting virtually any diagnostic requirement for maxillofacial dentistry.

**User benefits for SCARA**
The precise free-flowing arm movements allow for a wider variety of imaging programs not possible with other X-ray units with fixed rotations. SCARA offers superior imaging capabilities for both existing and future technologies.

---

**Different models for different needs**

**Planmeca ProMax® 2D S3**
The three-joint model (SCARA3) Planmeca ProMax® 2D S3 has been designed for all imaging needs: panoramic, true extraoral bitewing, TMJ, sinus and 2D tomography.

**Planmeca ProMax® 2D S2**
The two-joint model (SCARA2) Planmeca ProMax® 2D S2 includes basic programs for panoramic, extraoral bitewing, TMJ and sinus imaging.

Both models can be easily upgraded to 3D imaging.

---

| **Standard** | Child (Paediatric) mode for each standard and optional program to reduce the dose |
| **Optional** | Horizontal and vertical segmenting for panoramic program |
| **Optional** | True Bitewing |
| **Optional: Advanced panoramic programs** | Interproximal panoramic |
| Orthogonal (peri) panoramic | Lateral PA TMJ |
| Lateral multiangle TMJ | PA multiangle TMJ |
| PA linear sinus | Lateral sinus |

**Optional: Tomography programs**
Digital linear tomography
**Planmeca ProMax X-ray unit offers the widest variety of imaging programs available – easily meeting all your clinical needs.**

**Panoramic imaging**
In addition to the Standard panoramic program, the following programs are offered:
- Interproximal panoramic program: generates an image, where interproximal teeth contacts are open. Primarily used for caries detection.
- Orthogonal panoramic program: produces an image with clearly visible alveolar crest for improved diagnostics. Ideal for periodontal imaging and implant planning.

**Horizontal and vertical segmenting for panoramic program**
With the Horizontal and vertical segmenting program, exposure can be strictly limited to the diagnostic region of interest. Patient dosage is reduced by up to 90% compared to full panoramic exposure.

**Extraoral bitewings**
The Bitewing program uses improved interproximal angulation geometry. The result is a bitewing image pair with low patient dose and excellent diagnostic quality.

**TMJ imaging**
The TMJ imaging programs produce lateral or posteroanterior views of open or closed temporomandibular joints. The imaging angle and position can be adjusted to correspond to the anatomy of each individual patient. The Lateral-PA TMJ program captures lateral and PA views on the same radiograph. The multi-angle TMJ programs produce radiographs with images from three different angles, from either the lateral or PA view.

**Sinus imaging**
The Sinus programs provide a clear view of the maxillary sinuses.

**Child mode for reduced dose**
Child mode reduces the patient dose remarkably for all programs by reducing the imaging area and exposure values. In the panoramic program the focal layer can also be narrowed.
Planmeca ProMax® extraoral bitewings are ideal for periodontics, elderly and child patients, claustrophobic patients, patients with a strong gag reflex, and patients in pain. Extraoral bitewings enhance clinical efficiency and take less time and effort than conventional intraoral bitewing imaging.

What are the advantages of extraoral bitewings?

- Ideal for all patients – no sensor positioning required
- Consistently opens interproximal contacts, giving better diagnostic value
- Larger diagnostic area than in intraoral modalities
- More clinical data: canine to third molar
- Enhanced clinical efficiency – takes less time and effort than conventional intraoral bitewings
- Enhanced patient experience and comfort – eliminates gagging

Better diagnostic value with extraoral bitewings
New opportunities for tomography

**Planmeca ProMax® 2D tomography programs** provide accurate tomographic information for the analysis, planning and follow-up of implant and surgical procedures.

**Valuable tool for implantology**
The Planmeca ProMax® tomography system produces clear tomographic slices of any part of the maxilla, mandible, or temporomandibular joints. The cross-sectional or longitudinal tomographs can be adjusted to any specific angle, and the constant 1.5x magnification factor and combination programs enable accurate measurements.

**Accurate automated tomography**
The position and angle of the tomographic exposure is automatically pre-adjusted according to program and target selection. An impression model of the patient’s dental arch can be used for easy and reliable fine-alignment, which can then be carried out practically and intuitively using the positioning joystick. The dual laser beams indicate the exact site and orientation of the tomographic cut.

**Combined, cross-sectional and longitudinal tomography**
The tomography programs include a wide range of manual and automatic cross-sectional and longitudinal imaging programs and their combinations. Combined tomography is highly valuable in implant planning, integrating cross-sectional and longitudinal views on the same radiograph. Both transversal and longitudinal views show the same position in two perpendicular projections, giving three-dimensional information on the target with the same magnification.
Our exceptional equipment and advanced software have been designed to meet all your orthodontic needs.

Cephalometric imaging with Planmeca ProMax® units

- The functional and easy-to-use head positioner ensures accurate positioning for all cephalometric projections
- The carbon fibre ear posts and nasal positioner are extremely stable, hygienic, and transparent to radiation
- The unit automatically aligns itself to take cephalometric exposures and then selects a corresponding collimator
- Dedicated collimation options for paediatric imaging

Two equipment options:

One-shot Planmeca ProCeph™ cephalostat

- Effective one-shot cephalostat
- Short exposure time – no motion artefacts, low patient dose
- Image sizes from 18 x 20 cm to 30 x 25 cm

Scanning Planmeca ProMax® cephalostat

- Digital cephalostat that scans your patient’s head horizontally using a narrow X-ray beam with an extremely low effective dose of radiation
- Exceptional flexibility in image formats, with field sizes of up to 30 x 27 cm

Easier and more accurate than ever before

Two options for cephalometric analyses:

Planmeca Romexis® Cephalometric Analysis module

Take advantage of the Planmeca Romexis® Cephalometric Analysis module’s wide range orthodontic and orthognathic tools.
- Tools for creating cephalometric analyses, superimpositions, and surgical treatment plans (VTO) in minutes
- Fully customisable analyses, norms, and reports
- Microsoft Excel export and import function
- Compatible with the Windows operating system

Online automatic analysis service

Acquire cephalometric analyses regardless of time and place with the Planmeca Romexis® automatic cephalometric analysis service.
- Online automatic cephalometric tracing in a few seconds
- Over 50 analyses available for download immediately after tracing
- Direct link from the Planmeca Romexis 2D module for ordering analyses

New!
Easy upgrade from 2D to 3D

Planmeca ProMax® – future proof and a great investment

Planmeca ProMax® 2D is designed with upgradeability in mind. The unit’s modular structure allows easy conversion to different imaging modalities, while the software-driven SCARA is extremely flexible, allowing you to benefit from new imaging projections.

Whether you’re upgrading your 2D unit to 3D, or adding a cephalometric arm, Planmeca has the right solution for you. Individual options can be installed before delivery or added later, making Planmeca ProMax the most versatile all-in-one X-ray unit available.
Planmeca ProOne® is our full-featured panoramic X-ray unit, designed with simplicity in mind. Featuring cutting-edge innovations, Planmeca ProOne combines extensive diagnostic capabilities and superior image quality into a compact, easy-to-use package.

**Easy patient positioning**

Open patient positioning and side entry minimise errors caused by incorrect patient positioning by allowing you to monitor the patient freely from both the front and side. Side entry allows easy access for all patients – standing or seated. Patient positioning is assisted by our triple laser beam system, which indicates the correct anatomical positioning points.

**User interface provides guidance**

The full-colour graphical user interface provides clear texts and symbols to guide you through your procedure. Settings are logically grouped and easy to understand, speeding up imaging and allowing you to focus on positioning your patient correctly and communicating with them.

**Autofocus – for perfect panoramics every time**

The unique Autofocus feature automatically positions the focal layer using a low-dose scout image of the patient’s central incisors. Landmarks in the patient’s anatomy are used to calculate placement, enabling practically error-free patient positioning and dramatically reducing the need for retakes. The result is the perfect panoramic image, every time.
Planmeca ProOne® offers you a wide variety of imaging programs for different radiographic needs. You can also select the correct exposure formats to minimise the radiation dose for all types of patients and diagnostic purposes.

**Child mode for optimal paediatric imaging**

In child mode, the imaging area and exposure values are reduced in all programs and also the focal layer can be narrowed in the panoramic program. The patient dose is reduced remarkably.
Intraoral imaging

Our premium Planmeca ProX™ intraoral X-ray unit and advanced sensor system Planmeca ProSensor® HD combine perfectly to meet your intraoral imaging needs. The integrated system guarantees a smooth imaging workflow, while the smart design features make it effortless to use. Our full-featured Planmeca ProScanner® imaging plate scanner offers top-quality images and a fast scanning process to support your everyday tasks.
Intraoral imaging

Planmeca ProX™

We’re very proud to introduce Planmeca ProX™ — the latest intraoral X-ray unit to feature in our exceptional range of imaging products. This advanced unit provides easy and precise positioning, a straightforward imaging process and top-quality images in high resolution. Planmeca ProX is uniquely designed to make intraoral imaging easier and more reliable than ever.

The premium intraoral X-ray unit
- Optimal images for all diagnostic needs: variable kV and mA
- Quick and easy to use: pre-programmed quick settings, practical design
- Digital-ready
- Integrated with Planmeca ProSensor® HD sensor system
- Smooth workflow with Planmeca Romexis®
- Versatile installation options

Highly adaptable imaging
Planmeca ProX™ adapts to both short-cone and long-cone imaging techniques. For maximum radiation hygiene, an additional rectangular collimator can be adapted for the long cone.

The steady X-ray unit arm provides accurate and drift-free positioning of the lightweight tube head. The unit’s flexible installation options mean it can accommodate a wide range of requirements and clinic layouts.

Quick imaging parameter settings
Planmeca ProX comes pre-programmed with quick settings for different exposure value combinations. Imaging parameters are automatically retrieved according to the selected exposure region and the diagnostic need, and values can also be manually adjusted if necessary. Simply select the image receptor to automatically adapt the pre-programmed settings for film, imaging plate or digital sensors, allowing rapid transition to new imaging technologies without reprogramming.

Faster X-ray examinations with digital sensor
Benefit from the ultimate in user-friendly intraoral imaging by combining Planmeca ProX with the Planmeca ProSensor HD digital sensor system. The image is displayed on the screen just seconds after exposure, significantly reducing the time needed for an intraoral X-ray examination compared to conventional film.
Intraoral imaging

Planmeca ProSensor® HD

Experience usability like never before

Our innovative Planmeca ProSensor® HD intraoral sensor offers a unique combination of unparalleled image quality, high-end patient-centred design, and usability. It sets a new standard for intraoral dental imaging – ensuring successful results and a smooth workflow in all treatment situations.

Cutting-edge image quality
With a true resolution of over 20 lp/mm, Planmeca ProSensor® HD offers real HD image quality. Supporting detailed diagnosis, the advanced imaging sensor with a fibre-optic layer captures sharp, low-noise and high contrast images. The wide dynamic range of the sensor ensures successful results each and every time.

Patient-centred design
To fulfill all intraoral imaging needs, Planmeca ProSensor HD is available in three different sizes. The rounded sensor edges make the procedure comfortable for patients and outstanding images are ready in a matter of seconds.

Usability comes as a standard
Planmeca ProSensor HD is always easily at hand. It can be integrated into the Planmeca ProX™ intraoral X-ray unit, or connected to through Ethernet or a USB port. The sensor has a sophisticated magnetic connector that is easy to attach with only one hand, while the white sensor colour enhances visibility to ease positioning. The elegant control box with a distinguished design is equipped with a colour-coded LED light, providing instant visual feedback of the imaging procedure. Hermetically sealed housing ensures effective infection control.

Carefree choice
Planmeca ProSensor HD has been designed to last. For optimal endurance, the sensor cable has been reinforced and includes only two wires. Our special five-year warranty program ensures a safe investment for your practice.
Intraoral imaging

Planmeca ProScanner®

Full-featured imaging plate scanner for both chairside and shared multi-room use

A member of our advanced intraoral imaging family, the Planmeca ProScanner® imaging plate scanner is a powerful solution for both chairside and shared multi-room use. It supports your everyday tasks with smart design details, enabling a fast scanning process.

Compact and fast
Packed in a streamlined and elegant design, the compact Planmeca ProScanner® fits any room. It allows top-quality images to be taken in a matter of seconds. A preview image is displayed on the scanner’s LCD touch screen for instant verification of the result, while the embedded eraser prepares the plates for further use. The 100 most recent images are saved on the scanner’s SD card for enhanced security.

Smart imaging plates in all sizes
Planmeca ProScanner imaging plates are durable, but also extra soft for patient comfort. They come in all imaging plate sizes – 0, 1, 2, 3, and 4c. The advanced plates are equipped with an RFID chip holding an electronic serial number. It is possible to sort, view and compare images for quality control, as well as count exposures by using the serial number of each plate in the Planmeca Romexis® software.

Perfect for multi-room clinics
Planmeca ProScanner is an ideal solution for clinics of all sizes. The scanner can be shared between multiple treatment rooms with the help of its intelligent RFID chip. In shared use, the plates can be tagged to a particular workstation and patient file by reading their serial numbers in the treatment room with the Planmeca ProID® RFID reader. Once the images have been scanned, they are automatically sent back based on their serial number. Operator errors are eliminated, as images can be scanned in any order – even between patients – resulting in a smooth and adjustable workflow.
Planmeca Romexis®
one software
for all your needs

We offer a revolutionary all-in-one software solution for clinics of all sizes. Our world-leading Planmeca Romexis® software is the brains behind all of our products, bringing together all the devices at your dental clinic from CAD/CAM to imaging devices and dental units. It supports the most versatile range of 2D and 3D imaging modalities.

Imaging and CAD/CAM in one software – an industry first
High-performance 2D imaging

Our advanced Planmeca Romexis® software suite offers the most versatile tools for 2D imaging. Diagnose images using our full range of enhancement tools – or view them wherever you are with our mobile apps. This flexible dental imaging suite adapts to your needs and will grow into the third dimension together with your practice.

Easy and powerful
Planmeca Romexis® is the software of choice for viewing and processing 2D images from Planmeca X-ray units. Powerful enhancement and analysis tools guarantee that accurate diagnosis is available to users in all specialties, while the intuitive interface guarantees confident, comfortable use from day one.

Sharing the results
Cases can be seamlessly transferred to mobile devices or partner clinics that use Planmeca Romexis or the free Planmeca Romexis® Viewer. Our integration with other systems allows you to freely utilise third-party products at your clinic. TWAIN support and DICOM standard compliance ensure that the software can be used together with most systems.

Integrated document management
The printing module with multi-page support is ideal for creating professional, high-quality printouts and radiology reports to be sent to referring dentists. Documents of any type can be attached to patient files, providing a convenient storage for cephalometric tracing reports, referral letters and other information.

Advanced implant planning
Planmeca Romexis provides powerful tools for implant planning, including realistic implant models from over 60 manufacturers.

Radiology interpretation module
The Planmeca Romexis® Radiological Findings module is the most advanced findings-recording tool on the market. Developed in cooperation with clinicians, its findings list is hierarchically categorised and can be freely edited. The module is especially designed for educational and radiology centres where uniformity of recordings is essential.

Free Planmeca Romexis® Viewer application
planmeca.com/Viewer

Full-featured viewer application
No installation required
Mac and Windows support
Distribute to specialists or patients
Access to unique X-ray device data

Our Planmeca Romexis® Clinic Management software module provides valuable and reliable equipment usage data. It is an ideal solution for all – from smaller private practices to large multi-site clinics.

All Planmeca X-ray units can be connected to the Planmeca Romexis® Clinic Management software module. The module collects information on the number and type of taken images and provides data from different units for reporting, improving clinic efficiency, and planning new investments.

Planmeca Romexis Clinic Management helps users stay on top of clinic operations with real-time information on Planmeca X-ray units and their status. Detailed equipment information – such as software versions, calibration dates, and history logs – ensures high-quality service and patient care at all times.

Your mobile world of imaging

Our advanced Planmeca mRomexis™ imaging application for iOS and Android allows you to flexibly view and capture images on mobile tablet devices. Remove the constraint of place – easily consult with colleagues and communicate with patients both in and outside your clinic.

Increased flexibility with Planmeca mRomexis™

Use our fast, easy, and light Planmeca mRomexis™ mobile imaging application to view all your images in the Planmeca Romexis® database on a local network, or to carry images with you on your tablet device. You can also use the application to capture 2D X-ray images with Planmeca equipment, or to take photos with the tablet camera.

Expand the possibilities of Planmeca Romexis and experience the new level of freedom our mobile world can offer!

Key benefits:
- Available for both iOS and Android tablets
- Supports an extensive range of images – 2D and 3D X-ray images, 3D dental models, STL files, Planmeca ProFace® facial photos, and standard photos
- Direct connectivity with the Planmeca Romexis® server for retrieving or saving images
- Convenient acquisition of 2D X-ray images with Planmeca equipment
- Capturing photos with the camera of the mobile device
- Voice annotations to images can be recorded using the mobile device’s microphone
- Flexible and secure retrieving of images via the Planmeca Romexis® Cloud image transfer service
- Excellent tool for patient education and communication

Download the Planmeca mRomexis™ application for iOS and Android from the App Store or Google Play.
Planmeca Romexis® Cloud is a secure image transfer service for Planmeca Romexis® users and their partners. Now you can easily share images and CAD/CAM cases with any specialist or patient.

**Features**
- Sending images to recipient
  - 2D images: panoramic, cephalometric, photos, intraoral X-ray images
  - 3D images: CBCT, 3D photos, surface scans
  - All annotations and other elements are included
- Sending documents to recipient
  - Attach one or more referrals, reports, or other documents

**Advantages**
- Seamlessly integrated into Planmeca Romexis® ensuring an efficient workflow – no need for external applications or CDs and DVDs
- Automatic delivery of images and attachments
- Automatic notification to recipient of new cases

**Versatile possibilities for communication**
Recipients can download and view images at no cost using:
- Planmeca Romexis
- Planmeca mRomexis™ imaging application for iOS and Android devices
- Free Planmeca Romexis® Viewer

Planmeca Romexis® software and Planmeca Romexis® Cloud subscription are required for sending new cases. Visit http://online.planmeca.com/ to subscribe and start sending images now.

Technical data

**Planmeca ProOne**

- **Generator**
  - Constant potential, resonance mode high frequency 60–80 kHz
- **X-ray tube**
  - Toshiba D-015B
- **Focal spot size**
  - 0.5 x 0.5 mm (IEC 336)
- **SID**
  - 480 mm (19 in.)
- **Total filtration**
  - min. 2.5 mm Al eq.
- **Anode voltage**
  - 60–70 kV
- **Anode current**
  - 2–7 mA DC
- **Exposure time**
  - 2–10 s
- **Line voltage**
  - 100–132 V~/50/60 Hz, 180–240 V~/50 Hz
- **Regulation**
  - ±10 % (automatic)
- **Line current**
  - 8–16 A
- **Power uptake**
  - max. 850 W
- **Chin rest level**
  - 95–178 cm (37.4–70 in.)
- **Colour**
  - White (RAL 9016)
- **Weight**
  - 67 kg (148 lbs)

**Imaging programs**

- **Standard, Basic panoramic programs**
  - Standard panoramic
  - Lateral TMJ
  - PA TMJ
  - PA Sinus
- **Standard**
  - Child (Paediatric) mode for each program to reduce the dose
- **Optional**
  - Horizontal and vertical segmenting for panoramic program
- **Optional**
  - Bitewing
- **Optional: Advanced panoramic programs**
  - Interproximal panoramic
  - Orthogonal (para) panoramic
  - Lateral-PA TMJ
  - Lateral multangle TMJ
  - Lateral non rotational sinus
  - Cross-sections
  - Bitewing

**Physical space requirements**

**Planmeca ProX**

- **Generator**
  - Constant potential, microprocessor controlled, operating frequency 66 kHz
- **X-ray tube**
  - Toshiba D-041SB
- **Focal spot size**
  - 0.4 mm according to IEC 60336
- **Cone diameter**
  - 60 mm (2.36 in.)
- **Max. symmetrical radiation field**
  - Rectangular 36 x 45 mm (1.42 x 1.77 in.)
  - Ø60 mm at SSD 200 mm
  - Ø60 mm at SSD 300 mm according to IEC 806
- **Total filtration**
  - min. 2.5 mm Al equivalent at 70 kV according to IEC 60522
- **Inherent filtration**
  - 1 mm Al equivalent at 70 kV according to IEC 60522
- **Anode voltage**
  - 60, 63, 66, 70 kV
- **Anode current**
  - 8, 7, 6, 5, 4, 3, 2 mA
- **Exposure times**
  - 0.01–2 sec., 24 steps
- **SSD (Source-Skin Distance)**
  - Standard/Long
  - 200 mm (8 in.)/300 mm (12 in.)
- **Mains voltage**
  - 100 V~/110-115 V~/220-240 V~, 50/60 Hz
- **Duty cycle**
  - Class I Type B
- **Weight**
  - Total 29 kg (64 lbs)
  - Tube head with standard cone 4.2 kg (9.3 lbs)
  - Tube head with long cone 4.5 kg (10 lbs)
- **Colour**
  - White (RAL 9016)

**Installation options**

- **Standard wall mount**
- **Ceiling mount**
- **Single stud mount**

Supported 2D modalities
- Intraoral
- Panoramic
- Cephalometric
- 2D linear tomography
- Photos
- Stack images (CBCT slices and panoramic slices)

Supported 3D modalities
- 3D CBCT
- 3D photo
- 3D surface scan

Supported photo sources
- Intraoral camera
- Digital camera or scanner (import or TWAIN capture)

Operating systems
- Win 7 Pro / Win 8.1 Pro / Win 10 (64 bit)
- Win 2008 Server / Win 2012 Server
- Mac* (OS X or newer)

For detailed information please see system requirements of Planmeca Romexis www.planmeca.com

*Cephalometric Analysis module, 3D Ortho Studio module and Planmeca PlanCAD Easy are supported on Windows operating systems.

Image formats
- JPEG or TIFF (2D image)
- DICOM (2D and 3D image)
- STL (3D image)

Image size
- 2D X-ray image: 1–9 MB
- 3D X-ray image: typically 50 MB–1 GB

Installation options
- Client-Server
- Java Web Start deployment

DIICOM 3.0 support
- DIICOM Import/Export
- DIICOM DIR Media Storage
- DIICOM Print SCU
- DIICOM Storage SCU
- DIICOM Worklist SCU
- DIICOM Query/Retrieve
- DIICOM Storage Commitment
- DIICOM MPPS

Interfaces
- TWAIN Client
- PMBridgetm (patient information and images)
- VDDS (patient information and images)
- InfoCarrier (patient information)
- Datagate (patient and user information)

3rd party software integrations
- Dolphin Imaging
- Nobel Clinician
- Materialise Dental Simplant
- Straumann coDiagnostiX
- Cybermed N-Liten

Planmeca Showroom
One software for all.

Planmeca Oy designs and manufactures a full line of industry-leading dental equipment, including 3D and 2D imaging devices, CAD/CAM solutions, dental care units and software. Planmeca Oy, the parent company of the Finnish Planmeca Group, is strongly committed to better care through innovation, and it is the largest privately held company in the field.
