

# Beyond the basics of CAD/CAM

This intermediate course covers CAD/CAM techniques for creating multiple restorations, further increasing clinical proficiency. It is recommended for users with previous CAD/CAM experience.

## Course objectives

- Acquire and implement proper techniques for tooth preparation in multiple restorations
- Understand soft tissue management for successful provisionalization and restoration of teeth and implants
- Learn the design process for placement and restoration of single and multiple implant-retained restorations

## Course schedule

2 days with 13 hours of lectures and hands-on training  
**1 ECTS credit** (European Credit Transfer System) or  
**13 CE credits** (Continuing education)

### Day 1 (Lectures):

- Preparation rules for multiple restorations in the anterior zone
- Preparation rules for multiple restorations in the posterior zone
- Techniques for optimal tissue management and provisionalization
- Tooth wear and occlusion
- Material selection in anterior and posterior cases

### Day 2 (Lectures and hands-on):

- Planning, placing and restoring single and multiple implant-retained restorations
- Material selection for implant-supported restorations
- Clinical complications and solutions for multiple restorations
- Hands-on: Scanning and designing a single implant-supported crown.
