# How to look after Planmeca equipment before and after a period of inactivity

As many dental clinics are currently going through or preparing for a temporary clinic closure, we have compiled guides to help them through all the procedures that should be performed on Planmeca's dental, imaging and milling units both before and after a longer break.

These guides will also come in handy before and after holiday periods.

<b>Maintenance and infection control for scheduled down-time periods</b> <i>in the Planmeca Material Bank &gt;&gt;</i>	<a href="#">Planmeca dental units &gt;&gt;</a> <a href="#">Planmeca imaging units &gt;&gt;</a> <a href="#">Planmeca milling units &gt;&gt;</a>

# Ensuring the safety of the Planmeca maintenance staff during the pandemic

In order to ensure the safety of their maintenance team during the coronavirus pandemic, our Finnish distributor Plandent Oy has prepared a set of instructions that are to be followed during maintenance visits to dental clinics in Finland. We encourage you to send these instructions to your maintenance team and if necessary, modify them to serve your market.

# Planmeca solutions for impeccable infection control

Clean water and infection control that meets the highest of standards have always been essential elements in Planmeca's product design – supporting the safety of the clinic staff and ensuring a risk-free treatment environment for patients.

We have compiled a list of useful tips and materials that will help dental clinics take care of their Planmeca equipment in a safe, smart and easy way. Don't forget to introduce these materials to your customers so that they can learn how to take full advantage of our infection control solutions.
